- 20. October** – Last day to send in revised accepted papers.
- 20.-22. November** – NokobIT Conference is held.

Held in cooperation with
[Norwegian Informatics Conference.](#)

NokobIT is a yearly scientific conference in information science and technology. NokobIT has primarily brought together academics, researchers and practitioners from multi-levels and multi-discipline backgrounds in the Norwegian community. However, we welcome and encourage international contributors as well. This years NokobIT is the 14th in the series. The conference has been co-located in the same conference venue as the Norwegian Informatics Conference since 1999.

NokobIT 2006 conference accepts contributions in the area of information science and technology with a broad definition of this domain. The academic area has become more important in today's society with its focus on Information Communications Technologies (ICT) and in a context that goes beyond the purely technical. The information scientist perspective helps us to understand how ICT today permeates and forms our society at all levels.

Conference Location: Molde, NORWAY

Conference is arranged at the [Quality Hotel Alexandra Molde](#), Storgt.1-7, in the center of Molde. Participants are asked to make their own reservations.

Contributing to the Conference

We accept scientific articles within 15 pages that describe ongoing or finished research. The format for submission is the same as [MIS Quarterly manuscript guidelines](#). We also invite proposals for themes for discussion forums, panel debates or posters. Send all proposed contributions (in Word) to the local program committee. We especially invite doctoral students that wish to try out presenting their research topics in a comfortable and safe environment.
